input.1p

Java

```java
package q10737;

public class Student {
    public static void main(String[] args) {
        try {
            Class<?> clazz = Class.forName("q10737.Student");
            System.out.println("class Student found");
        } catch (ClassNotFoundException cnfe) {
            try {
                Class<?> badClazz = Class.forName("q10737.student");
                System.out.println("class student found");
            } catch (ClassNotFoundException cnfe1) {
                System.out.println("class Student not found");
            }
        }
    }
}

```
